

SITE NEWS

8th October 2021

Dear Community Member

As part of our commitment to the maintenance and modernisation of Fawley, we will be upgrading one of our flare stacks.

Tomorrow (weather permitting) we will begin by carrying out the safe removal of this stack.

The replacement flare will be of similar height, use the latest flare tip technology and demonstrates our ongoing commitment to safety and the environment. This replacement is due to be installed at the end of October.

During this period, we may need to make use of our other three flares and, as always, we will work hard to minimise duration and any potential disruption.

Our flares play an important safety and operational role for the site. Use of the flares is safe and we add steam to ensure the most efficient combustion high off into the atmosphere.

You can now follow our updates on Twitter (@ExxonMobilFAW) and we would like to thank you for your patience and understanding as we carry out this upgrade.

Regards

Annita McCurdy
Process Manager
