

Planned Flaring - 12 April

We are now just 3 days away from our scheduled stand down of operations to deliver our plant upgrade.

To do this, we will need to use our elevated flare. But to minimise community disruption we are working to ensure this is for a limited period during this day only.

The use of our flare is planned, is part of its design, and is completely safe.

The stand down will enable a programme of upgrade work to be carried out to help reduce the frequency of flaring by improving reliability.
